

DASTAAN

Salon Management & E-Commerce Platform

Product Requirements Document — v1.0

Prepared for: Owner review & Developer scoping

Brand palette: Black · Charcoal · Gold

Date: August 2026

1. Purpose of This Document

This document defines the full functional scope for the Dastaan salon platform: a role-based, multi-branch booking and management system with an integrated e-commerce store. It is written to be reviewed and approved by the owner, and then used by the developer as the build specification.

Once approved, this document becomes the baseline scope. Any changes after approval should be logged as a change request rather than built silently, so timeline and cost stay predictable.

2. User Roles & Access Hierarchy

The system has four roles, in descending order of access:

Super Admin → **Admin** → **Barber** → **Client**

2.1 Role Definitions

- **Super Admin** — Owner and one trusted operator (you). Full visibility and control across every branch: all bookings, all client data, all staff credentials, sales, inventory, and the online store.
- **Admin (Receptionist)** — Front-desk staff. Manages bookings, client details, and day-to-day operations for their branch. Created by Super Admin only.
- **Barber** — Service staff. View-only access to their own bookings, schedule, and personal performance reports.
- **Client** — End customer. Books appointments and purchases products via the public website.

2.2 Permissions Matrix

Capability	Super Admin	Admin	Barber	Client
View / edit all clients' bookings (any branch)	Yes	Own branch only	No	No
Create / reschedule / cancel bookings	Yes	Yes	No	Own bookings only
View / edit client personal details	Yes	Yes	No	Own profile only
Create Admin accounts	Yes	No	No	No
Create Barber accounts	Yes	Yes (per branch)	No	No
Set / reset staff 4-digit login codes	Yes (all)	No (own code only)	No (own code only)	N/A

View / reset any user's password or credentials	Yes (all)	No	No	Own password only
View own bookings & personal analytics	Yes	Yes	Yes	Yes
View sales summary / sales reports	Yes	No	No	No
Manage online product listings	Yes	No	No	No
Purchase products via online store	Yes	N/A	N/A	Yes
View inventory levels	Yes	View only (branch)	No	No
Access POS (in-branch checkout)	Yes	Yes	No	No
Manage multi-branch settings	Yes	No	No	No

3. Authentication & Login Flows

3.1 Client Login (Public)

Standard public flow, reached from a visible "Log In" button on the homepage:

1. Homepage → Login / Profile icon
2. Login screen offers: Email + Password, "Create New Account," and "Sign in with Google"
3. New accounts can also be created inline during checkout (guest → account conversion)
4. Clients can reset their own password via a standard "Forgot Password" email link — self-service, no staff involvement needed.

3.2 Staff Login (Hidden)

Admin and Barber accounts do NOT log in through the public login screen, and there is no visible button or link to their login page anywhere on the site. It is only reachable by manually typing a specific URL path, e.g.:

dastaan.com/team

This route leads to a 4-digit code entry screen only — no ID/password fields, to keep staff login fast at the front desk.

How staff codes work

- Super Admin sets the initial 4-digit code when creating an Admin or Barber account.
- Admin can change their own code after logging in, if they choose to.
- Barber can also change their own code (recommended, for consistency with Admin — confirm with developer during build).
- Super Admin can view/reset any staff member's code at any time.
- Each branch's staff codes should be scoped so the same 4-digit code can be reused across different branches without clashing (code + branch + role identifies the account, not code alone).

Security note: 4-digit codes are a convenience layer for front-desk speed, not a substitute for account security. Recommend rate-limiting attempts and auto-lockout after repeated failures on the /team screen.

3.3 Super Admin Access

Super Admin can log in via the same hidden staff route with elevated credentials (recommend a stronger login — ID + password, or ID + password + code — rather than a 4-digit code alone, given the level of access). To be finalized with developer.

4. Multi-Branch Support

The platform must support multiple salon branches/locations from a single system:

- Clients can pick a branch when booking (or be shown the nearest one).
- Admin and Barber accounts are tied to one (or more, if needed) specific branch.
- Admin sees and manages only their own branch's bookings, clients, and inventory.
- Super Admin sees all branches at once, with the ability to filter by branch.
- Inventory, POS, staff rosters, and reports are all branch-aware.
- Sales/online-store data can be viewed system-wide or filtered per branch by Super Admin.

5. Booking, Scheduling & Service Status

5.1 Booking Type Indicators

Every booking on the calendar should be visually flagged with its type:

- ✓ Booked with a specific barber
- ⌚ Online booked / reserved (client self-booked via website)

5.2 Payment Status Indicators

- **Filled / shaded icon** — Paid
- **Outline / uncolored icon** — Unpaid

5.3 Service Status Stages

Each booking moves through the following statuses:

1. Booked
2. Confirmed
3. Arrived
4. Started
5. No Show
6. Cancel — selecting Cancel prompts a required reason field before the change is saved

5.4 Automated Notifications

- Text message sent immediately to confirm a booking.
- Reminder message sent for future-dated bookings, at least 2 hours before the appointment.

- Post-service message requesting feedback — routes to both an in-app/inbuilt review and a Google review prompt.

6. Loyalty Program

- Digital loyalty card, compatible with Apple Wallet.
- Card displays a scannable QR code.
- QR code must also be scannable/readable from a computer screen (not phone-camera-only), so front desk can scan a client's phone screen directly at a webcam-equipped POS station.

7. Barber App / Portal

Barbers get a restricted, read-mostly view scoped entirely to themselves:

- Can see only their own bookings and schedule.
- Cannot edit, reschedule, or cancel any booking.
- Cannot create new bookings.
- Cannot view or edit any client details.
- Has access to personal analytics/reports — their own booking volume, completed services, ratings, and earnings summary.
- No visibility into sales figures, other barbers' data, inventory, or the online store.

8. Discount Codes & Coupons

A coupon system supporting discount codes that can be applied at checkout — for both service bookings and product purchases. Super Admin (and Admin, for in-branch use, to be confirmed) can generate and manage codes.

9. Auto-Generated Invoicing

An invoice is generated and sent automatically once a service is marked complete and paid — no manual step required by front desk staff.

10. Inventory Management

Stock tracking for retail products and in-salon supplies, branch-aware, with visibility rules matching the permissions matrix in Section 2.2.

11. Point of Sale (POS)

- Built-in POS for in-branch product sales.
- Same checkout also supports checking out a completed service (combined product + service checkout in one transaction).

- Price and discount fields must be editable directly at checkout (for manual adjustments, comps, or negotiated pricing).

12. Online Store (E-Commerce)

Clients can browse and purchase salon products directly from the website.

12.1 Visibility Rules

- Online product listings, sales data, and sales reports are visible ONLY to Super Admin.
- Admin, Barber, and Client account views never show sales figures, revenue reports, or the product-management backend.
- Clients see the storefront only (browse, cart, checkout) — not any internal sales data.

12.2 Super Admin Controls

- Add / edit / remove products and pricing.
- View sales summary and sales reports (system-wide and per-branch).
- Manage stock tied in with Section 10 (Inventory).

13. Timeline-Based History

The daily calendar/schedule state should be archived every day, so historical booking data — who was booked, statuses, changes — remains queryable later rather than being overwritten. This underpins both the sales reports and the barber personal-analytics views.

14. Data & Credential Security

- Only Super Admin can view or reset staff credentials (Admin/Barber passwords or 4-digit codes).
- Clients can only reset their own password (self-service, via email link) — they cannot view or change anyone else's credentials, and staff cannot see a client's password.
- Client payment and personal data should follow standard encryption-at-rest and in-transit practice; developer to confirm payment gateway/PCI approach.
- Recommend audit logging on: credential resets, booking edits/cancellations by Admin, and any sales/inventory changes by Super Admin.

15. Open Items for Developer & Owner to Confirm

Flagged during scoping — need a decision before/during build:

1. Should Barbers be able to change their own 4-digit code (like Admin), or should that stay Super-Admin-only for barbers?
2. Can Admin generate discount codes, or is that Super-Admin-only?
3. Should Admin see inventory as view-only, or also be able to adjust stock counts (e.g. receiving shipments)?

4. Super Admin's own staff-route login — 4-digit code, or a stronger ID+password (recommended given the access level)?
5. Payment gateway preference for the online store and in-branch POS (e.g. Stripe, Razorpay, local provider)?
6. Should each Admin/Barber belong to exactly one branch, or should some staff work across multiple branches?
7. Retention period for daily archived timeline/history data?
